

AI engineering student building **privacy-first healthcare solutions** and **edge-computing AI**. Solo freshman finalist at India's largest Meta Hackathon out of **32,000+ teams**, selected for the **Top 100 Bangalore Finals**. I ship production-grade systems that prove powerful AI and human dignity are not trade-offs—8+ AI projects deployed, every one designed to run locally and respect user data.

EDUCATION	AWARDS & RECOGNITION
GLA University B.Tech in Computer Science — Freshman	2023 – Present ▶ Top 100 Finalist — Meta OpenEnv Hackathon (32K+ teams) ▶ Selected — UOE Summer of Code 2026 (CrisisGuard AI) ▶ Winner — Microsoft Build AI Hackathon (EcoNudge SDK)

SELECTED PROJECTS

CrisisGuard AI — Privacy-First Mental Health Crisis Detection

SELF-INITIATED

- Engineered a clinical-grade NLP engine detecting **9 crisis categories** that runs **100% in-browser** via edge computing — zero data ever leaves the device.
- Integrated GPS-based counselor finder mapped to **13+ countries**. Selected for UOE Summer of Code 2026.

EcoNudge SDK — The Sustainability Layer for the Internet

TEAM PROJECT

Lead Architect & Spatial Engineer

- Architected a headless React SDK with **sub-50ms latency** that injects carbon-intelligence into e-commerce checkout flows.
- Built a **3D WebGL Earth visualization** with mathematical shaders reflecting real-world environmental data. Won the Microsoft Build AI Hackathon.

ZeroTrust Guardian — AI-Powered Digital Safety

TEAM PROJECT

Team Lead & Architect

- Led engineering of a multi-agent AI Chrome extension that validates SSL certificates and detects psychological dark patterns in real-time.
- Designed the **local-first privacy architecture** — all AI inference runs on-device. Threats are distilled into plain-English summaries.

MedSafe AI — On-Device Clinical Pharmacologist

HACKATHON

- Ran a **1-Billion parameter Llama 3.2 LLM entirely in-browser** via WebGPU to analyze drug-food-supplement interactions with zero cloud dependency.
- Integrated local OCR prescription scanning and Web Speech API for a fully private, HIPAA-compliant pharmacological assistant.

SynthAudit.Env — Clinical Trial RL Benchmark (Meta Hackathon)

SOLO FINALIST

- Built an RL benchmark so rigorous that **Meta's Llama 3.1 405B scored only 0.34/1**. Solo freshman selected for the Top 100 Bangalore Finals against 32,000+ teams of senior engineers.

TECHNICAL SKILLS

Python

JavaScript / TypeScript

C / C++

PyTorch

TensorFlow

Reinforcement Learning

Natural Language Processing

WebGPU

Edge Computing

React.js & Next.js

FastAPI

WebGL / Three.js

Docker

Git / GitHub

Figma

Privacy-First Architecture

WHY APPLE DEVELOPER ACADEMY

My work is inherently interdisciplinary — I don't just write code, I design systems at the intersection of healthcare ethics, data privacy, and spatial computing. From running billion-parameter LLMs in browsers to building 3D sustainability dashboards, I've proven that powerful AI can be invisible, local, and deeply human. I want to bring this relentless drive to the Academy's 9-month journey, collaborating with diverse minds to build technology that people genuinely trust.
