AI engineering student building **privacy-first healthcare solutions** and **edge-computing AI**. Solo freshman finalist at India's largest Meta Hackathon out of **32,000+ teams**, selected for the **Top 100 Nationally**. National Top 3 INSPIRE MANAK awardee selected from **700,000+ entries** by the Government of India. I ship production-grade systems that prove powerful AI and human dignity are not trade-offs — 8+ AI projects deployed, every one designed to run locally and respect user data.

EDUCATION

GLA University

B.Tech in Computer Science — Freshman

2023 – Present

AWARDS & RECOGNITION

- 🏆 **INSPIRE MANAK Award** — Govt. of India (DST), National Top 3 out of 700K+ entries
- 🏆 **Top 100 Nationally** — Meta OpenEnv Hackathon (32K+ teams, solo freshman)
- 🏆 **Selected** — UOE Summer of Code 2026 (CrisisGuard AI)

SELECTED PROJECTS

CrisisGuard AI — Privacy-First Mental Health Crisis Detection

SELF-INITIATED

- Engineered a clinical-grade NLP engine detecting **9 crisis categories** that runs **100% in-browser** via edge computing — zero data ever leaves the device. No servers, no surveillance, just trust.
- Built a GPS-based counselor finder serving **13+ countries** with real-time proximity matching. Recognized and selected for the **UOE Summer of Code 2026**.

EcoNudge SDK — The Sustainability Layer for the Internet

TEAM PROJECT

Lead Architect & Spatial Engineer

- Architected an invisible headless React SDK with **sub-50ms latency** that injects real-time carbon-intelligence directly into e-commerce checkout flows, transforming them into ESG-compliant, gamified experiences.
- Implemented a **3D WebGL Earth visualization** with custom mathematical shaders that map live environmental metrics to a rotating globe — turning abstract carbon data into an emotionally resonant, tactile interface.

Clinical Trial Auditor — AI Agent for Protocol Deviation Triage

META HACKATHON

- Built an autonomous RL environment where AI agents learn to triage clinical protocol deviations — detecting dangerous trial irregularities that threaten patient safety.
- Cleared Round 1 as a **solo freshman** against **32,000+ teams** of senior developers to advance to the Top 800 nationally.

SynthAudit.Env — RL Benchmark That Broke Llama 405B

SOLO FINALIST

- Engineered an RL benchmark so rigorous that **Meta's own Llama 3.1 405B scored only 0.34/1**, exposing critical gaps in state-of-the-art reasoning. Selected for the **Top 100 Bangalore Finals** — the only solo freshman among teams of industry veterans.

MedSafe AI — On-Device Clinical Pharmacologist

HACKATHON

- Ran a **1-Billion parameter Llama 3.2 LLM entirely in-browser** via WebGPU — zero cloud, zero latency, 100% HIPAA-compliant drug-food-supplement interaction analysis.
- Integrated local OCR prescription scanning and Web Speech API, creating a fully private on-device pharmacological assistant that keeps patient data on their hardware.

ZeroTrust Guardian — AI-Powered Digital Safety

TEAM PROJECT

Team Lead & Architect

- Led engineering of a multi-agent AI Chrome extension that silently validates SSL certificates and detects psychological dark patterns in real-time — all inference runs on-device with a **local-first privacy architecture**. Complex threats are distilled into plain-English summaries that protect users without overwhelming them.

TECHNICAL SKILLS

Python

JavaScript / TypeScript

C / C++

PyTorch

TensorFlow

Reinforcement Learning

Natural Language Processing

WebGPU

Edge Computing

React.js & Next.js

FastAPI

WebGL / Three.js

Docker

Git / GitHub

Figma

Privacy-First Architecture

WHY APPLE DEVELOPER ACADEMY

My work is inherently interdisciplinary — I don't just write code, I design systems at the intersection of healthcare ethics, data privacy, and spatial computing. From running billion-parameter LLMs in browsers to building 3D sustainability dashboards, I've proven that powerful AI can be invisible, local, and deeply human. I want to bring this relentless drive to the Academy's 9-month journey, collaborating with diverse minds to build technology that people genuinely trust.
