

Sumit Saraswat

AI Engineer & Full-Stack Innovator

📍 Mathura, India ✉ saraswatsumit070@gmail.com 🔗 GitHub 🔗 LinkedIn

Passionate AI engineering student focused on building privacy-first tech solutions, scalable software, and edge-computing AI. Placed in the Top 100 nationwide at Meta's OpenEnv Hackathon out of 32,000+ teams as a solo freshman. Driven to architect innovative and secure tools that tackle complex challenges using modern tech stacks.

EDUCATION

GLA University

2025 – 2029

Bachelor of Technology in Computer Science (B.Tech CS) - Freshman

Currently pursuing foundational and advanced studies in algorithms, data structures, full-stack development, and machine learning.

AWARDS & ACHIEVEMENTS

Top 100 National Finalist – Meta OpenEnv Hackathon ([Round 1 Repo](#) | [Round 2 Repo](#))

2026

- Cleared Round 1 competing against 32,000+ teams of senior developers and working professionals, advancing to the Top 800.
- In the offline finals at Bangalore, successfully placed in the **Top 100 nationwide as a solo competitor** against industry veterans and multi-member professional teams.
- Built an autonomous RL auditing environment (SynthAudit) that rigorously tested the limits of Meta's Llama 3.1 405B frontier model.

KEY PROJECTS

MedSafe AI ([YouTube](#) | [Live Demo](#) | [GitHub](#))

2026

Offline-First Clinical Pharmacologist (WebGPU & Local LLM)

- Architected an offline-first web app running a 1-Billion parameter LLM (Llama 3.2 1B) entirely in the browser via WebGPU using `@mlc-ai/web-llm`.
- Integrated Tesseract.js for on-device OCR prescription scanning and Web Speech API for dynamic voice input, analyzing drug-food-supplement interactions.
- Ensured 100% data privacy and zero cloud server costs by executing all inference and image processing directly on the client's hardware.

CrisisGuard AI ([YouTube](#) | [Live Demo](#) | [GitHub](#))

2026

Privacy-First Mental Health Crisis Detection

- Developed a high-performance NLP engine that runs 100% locally in the browser using edge computing paradigms.
- Detects 9 distinct categories of mental health crises with zero data surveillance.
- Integrated a secure GPS-based counselor finder mapped to 13+ countries utilizing geolocation APIs.

KEY PROJECTS (CONTINUED)

Equity-Aware Survival Analysis [\(GitHub\)](#)

2024

Auditing Machine Learning Fairness

- Engineered a computational pipeline auditing survival models across 170,000+ records to identify rare but catastrophic false-negative failure modes.
- Applied advanced statistical analysis and fairness-aware machine learning techniques to evaluate human-centric safety across demographic populations.

SKILLS & TECHNOLOGIES

Programming Languages

Python, JavaScript / TypeScript, HTML/CSS, C/C++

AI & Machine Learning

PyTorch, Reinforcement Learning, WebGPU LLMs, Edge Computing

Frameworks & Libraries

React.js, Vite, TailwindCSS, TensorFlow, Pandas

Tools & Infrastructure

Docker, Git/GitHub, Gymnasium, Tesseract.js

HACKATHON READINESS & APPROACH

My approach to building software is intensely rapid, iterative, and inherently interdisciplinary. I thrive in high-pressure environments, leveraging my experience as a solo competitor who outperformed thousands of senior professionals at the Meta OpenEnv finals. By combining edge computing (CrisisGuard AI) with WebGPU local inference (MedSafe AI), I build robust, scalable architectures that solve complex problems without sacrificing privacy or user experience. I am highly adaptable and excited to bring this relentless work ethic to the next major engineering challenge.
