

Sumit Saraswat

AI Engineer & Healthcare Innovator

📍 Mathura, India ✉ saraswatsumit070@gmail.com 🔗 GitHub 🔗 LinkedIn

Passionate AI engineering student focused on building privacy-first healthcare solutions and edge-computing AI. Solo finalist at India's largest Meta OpenEnv Hackathon out of 32,000+ teams. Driven to create technology that respects human dignity, ensuring powerful AI tools are secure, client-side, and accessible.

EDUCATION

GLA University

2023 – Present

Bachelor of Technology in Computer Science (B.Tech CS) - Freshman

Currently pursuing foundational and advanced studies in algorithms, data structures, and machine learning.

AWARDS & ACHIEVEMENTS

Top Finalist – Meta OpenEnv Hackathon (Bangalore)

2024

- Selected as a Solo Participant out of 32,000+ team submissions for Meta's 48-hour offline finals.
- Built an autonomous clinical trial auditing RL environment and SynthAudit benchmark that exposed limitations in Meta's Llama 3.1 405B model.

Selected Participant – UOE Summer of Code

2026

- Selected for my project "CrisisGuard AI", demonstrating exceptional capabilities in client-side NLP and data privacy.

KEY PROJECTS (EXPERIENCE)

CrisisGuard AI

Self-Initiated

Privacy-First Mental Health Crisis Detection

- Developed a clinical-grade NLP engine that runs 100% locally in the browser using edge computing.
- Detects 9 categories of mental health crises with zero data surveillance.
- Integrated a secure GPS-based counselor finder mapped to 13+ countries.

MedGraph-AI

Self-Initiated

Evidence-Based Medical Chatbot

- Built a healthcare knowledge graph system connecting drugs, treatments, and symptoms.
- Implemented Retrieval-Augmented Generation (RAG) to ensure AI responses are grounded in structured, factual data rather than hallucinations.

KEY PROJECTS (CONTINUED)

Breast Cancer Diagnostic Model

Self-Initiated

Machine Learning for Oncology

- Developed an end-to-end predictive machine learning pipeline to classify breast cancer tumors as benign or malignant based on cellular data.
- Performed extensive data preprocessing and feature engineering to maximize recall and precision, crucial for medical diagnostic tools.

SKILLS & TECHNOLOGIES

Programming Languages

Python, JavaScript, HTML, CSS, C/C++

AI & Machine Learning

Reinforcement Learning, NLP, Knowledge Graphs, RAG, Edge Computing

Data Science Libraries

TensorFlow, Scikit-learn, Pandas, NumPy

Tools & Frameworks

Docker, Git/GitHub, Meta OpenEnv, Gymnasium

MOTIVATION & INTERDISCIPLINARY APPROACH

My approach to technology is inherently interdisciplinary—I do not just write code; I design systems that sit at the intersection of healthcare ethics, data privacy, and advanced machine learning. By combining edge computing with mental health (CrisisGuard) and strict data structuring with medical diagnostics (MedGraph-AI), I aim to create interfaces that are not only technologically advanced but also deeply empathetic. I am excited to bring this relentless work ethic and passion for human-centric design to the 9-month learning journey at the Apple Developer Academy.
